

Kiril Abaškin

Frontend developer

Coherent Solutions 2021 November – currently employed

<https://www.coherentsolutions.com/>

Project **Monorepo** (11 2021 – 01 2022)

Software developer

Migrate separate npm packages to single monorepo and configure deployment, build, packaging and versioning of those packages. Used Lerna for automating monorepo and rollup for building ES modules and commonjs artifacts. Documented and introduced for a team of 10 – 15 developers.

Tools, Environment, Languages and Technologies: github packages, lerna, typescript, powershell, circle CI

1stDibs 2017 March – 2021 June

Project **Growth** (10 2019 – 2021 06)

Software developer

Use different internal/external strategies to increase search engine ranking, lower bounce rate, fulfill user experience with automatically generated content.

- Implement different strategies for increasing traffic
- Created internal tools for configuring and improving SEO
- Migrated Q&A project from WordPress to react, relay, and graphql stack

Tools, Environment, Languages and Technologies: react, relay, graphql, express.js, AMP

Project **Personalize experience** (10 2018 – 10 2019)

Software developer

The goal of the project was to generate more users and get information from them so we could make a more personalized experience in terms of product prices, verticals and etc.

- Email-only registration flow
- Interactive questionnaire
- Improve UX of onboarding new users

Tools, Environment, Languages and Technologies: react, graphql, relay, typescript, express.js, fastify

Project **Internationalization and localization** (10 2017 – 10 2018)

Software developer

The goal of the project was to internationalize and localize buyer-side web application. We have created an automated pipeline for translations, supporting a few new domains (fr, co.uk, de).

- Localize buyer side of 1stDibs platform
- Created automated pipeline for translating American English to different languages such as German, French and British English.
- Migrate and provide correct locale by domain

Tools, Environment, Languages and Technologies: react INTL, react, graphql, relay, express.js, Nginx

Project **Mobile web app** (03 2017 – 09 2017)

Software developer

Rewrite search and browse, product pages with react, relay, and graphql. Migrate code from PHP to new technological stack. Maintain all major parts, also improve load time and create maintainable and easily expandable codebase for JS/Frontend developers.

- Rewrite search and browse pages from PHP to react, relay and graphql
- Optimize UI for best mobile experience
- Create mobile first ex
- Migrate all parts to new codebase and update UI

Tools, Environment, Languages and Technologies: react, relay, typescript, graphql, lodash, express.js

Project **Implement style guide driven development** (2016 01 – 2017 01)

Software developer

Main goal of the project was to implement style guides for our UI library. We had around 18 projects built by different developers so our goal was to maintain UX between those products since they were operating under one domain, also making for other developers implementing UI part simpler and shortening overall product development time.

- Document and create different UI modules for usage in other projects
- Continuously update and maintain consistent UI/UX experience across the platform
- Present and train other developers on how to effectively use and build UI

Tools, Environment, Languages and Technologies: web components, nodejs, jQuery, backbone.js, javascript

Project **UI library** (02 2015 – 01 2017)

Software developer

Maintain our internal UI library which was used to build various internal projects used by our clients. Main responsibilities was to create/update UI components, maintain already created and help implement those in projects.

- Create and maintain different UI elements (datepicker, grid, multi-select) for our UI library
- Document and help other teams in implementing those UI elements in their projects
- Support and bug fix components
- Scale and maintain our internal UI solutions used by different teams and projects

Tools, Environment, Languages and Technologies: lodash, bootstrap, jQuery, backbone.js, javascript

Project **HTML5 advertising** (11 2013 – 02 2015)

HTML5 interactive ads creator

Creating interactive HTML5 ads for EU/UK publishers. Creating responsive, mobile-first ads. This project included a lot of communication with clients – determining client goals, approving designs and etc.

- Worked with different EU and UK publishers
- Created interactive ads for different main EU publishers such as Aftonbladet, Sky and etc.
- Helped clients with deciding on design and animations for their ads
- Improved ads by reducing the weight of assets and adding statistics for future improvements

Tools, Environment, Languages and Technologies: HTML5, canvas, javascript, jQuery

Technology stack

React

GraphQL

Relay

Redux

LESS/Sass

NodeJS

Git

Fastify

AWS/Lambda

Jest/Mocha
