Kiril Abaškin

Full-stack Javascript Developer

Programming Languages	JavaScript, Typescript
Databases	MySQL, PostgreSQL
Tools and Technologies	React, GraphQL, Relay, Redux, LESS/Sass, NodeJS, React Query
Code management	Git, Lerna, GitHub actions, Webpack, rollup, ViteJS

Wix – Vilnius, Lithuania

https://wix.com

Product: Wix Blog (2022.08 - Present)

Senior Software Engineer

Implemented a bunch of features related to AI: post generation, AI-assistants for categories and tags creation. Improved the quality of the product by migrating to TypeScript and modern UI tools for managing state. Contributed to different projects within the Wix company.

Tools, Environment, Languages, and Technologies: **Typescript**, **React, Redux, React Query, Playwright, Puppeteer**

Coherent Solutions – Vilnius, Lithuania

Client: Achieve.com

Project: Communications (06 2022 - 01 2023)

Lead Software developer

Internal UI for communication with clients - sms/email history, integration with Firebase, and external APIs. Ability to send email or sms, keep the conversation, and see all history within the internal user management system for mortgage advisors.

Tools, Environment, Languages, and Technologies: **react, react-query, typescript, emotion, firebase, jest**

Project: Custom build chat (03 2022 - 05 2022)

Lead Software developer

Created a custom chat that both internal and external clients could use. Manage the stateless web sockets API from LiveChat for controlling notifications, chat history, and handling unresponsive chats by transferring them to free agents.

Tools, Environment, Languages, and Technologies: **Typescript**, **React, redux, web sockets, LiveChat API, jest**

Project: Monorepo for common UI packages (11 2021 - 02 2022)

Senior Software developer

Created a solution for managing reusable packages for frontend applications. Organized workflow for building, deploying, and publishing with lerna and migrated all packages from different repositories, maintaining all commit history. Used conventional commits for correct package versioning.

Tools, Environment, Languages, and Technologies: **lerna, rollup, shell, GitHub actions**

1stDibs – Vilnius, Lithuania

https://1stdibs.com

Project: Growth (10 2019 – 06 2021)

Software developer

Utilize various internal/external strategies to enhance search engine ranking, reduce bounce rate, and improve user experience with automatically generated content.

- Implement different strategies for increasing traffic
- Created internal tools for configuring and improving SEO
- Migrated Q&A project from WordPress to React, Relay, and graphQL stack

 Tools, Environment, Languages, and Technologies: **react, relay, graphQL, express.js, AMP**

Project: Personalize experience (10 2018 – 10 2019)

Software developer

The goal of the project was to attract more users and gather information from them, allowing us to create a more personalized experience in terms of product prices, verticals, and other aspects.

- Email-only registration flow
- Interactive questionnaire
- Improve the UX of onboarding

Tools, Environment, Languages, and Technologies: **react, graphQL, relay, express.js, fastify**

Project: I18n and l10n (10 2017 – 10 2018)

Software developer

The goal of the project was to internationalize and localize buyer-side web applications. We have created an automated pipeline for translations, supporting a few new domains (fr, co.uk, de).

- Localize the buyer side of the 1stdibs platform
- Created an automated pipeline for translating American English to different languages, such as German, French, and British English.
- Migrate and provide the correct locale by domain

Tools, Environment, and Technologies: **React INTL, react, graphql, relay, express.js, Nginx**

<u>Project: Mobile web app (03 2017 – 09 2017)</u>

Software developer

Refactor search and browse product pages with React, Relay, and graphQL. Migrate code from PHP to a new headless stack. Maintain all major parts, as well as improve load time and create a maintainable and easily expandable codebase for JS/FE developers.

- Rewrite search and browse pages from PHP to React, Relay, and graphQL
- Optimize UI for the best mobile experience
- Create mobile-first ex
- Migrate all parts to the new codebase and update UI

Tools, Environment, Technologies: **react, relay, Typescript, graphQL, lodash, express.js**

Adform – Vilnius, Lithuania

https://adform.com

<u>Project: Implement style guide-driven development (2016 01 – 2017 01)</u>

Frontend developer

The main goal of the project was to implement style guides for our UI library. We had around 18 projects built by different teams within an organization. Hence, our goal was to maintain UX between those products since they were operating under one domain, making other developers to implement the UI part and shortening overall product development time.

- Document and create different UI modules for usage in other projects
- Continuously update and maintain a consistent UI/UX experience across the platform
- Present and train other developers on how to use and implement our UI library within projects

Tools, Environment, and Technologies: **web components, nodejs, jQuery, Backbone.js, JavaScript**

<u>Project: UI library (02 2015 – 01 2017)</u>

Frontend developer

Maintain our internal UI library, which was used to build various internal projects used by our clients. My main responsibilities were to create/update UI components, maintain already created ones, and help implement those in projects.

- Create and maintain different UI elements (datepicker, grid, multi-select) for our UI library
- Document and help other teams in implementing those UI elements in their projects
- Support and bug fix components

Tools, Environment, and Technologies: **lodash, bootstrap, jQuery, backbone.js, JavaScript**

<u>Project: HTML5 advertising (11 2013 – 02 2015)</u>

HTML5 interactive ads creator

Creating interactive HTML5 ads for EU/UK publishers. Creating responsive, mobile-first ads. This project included a lot of communication with clients – determining client goals, approving designs, etc.

- Worked with different EU and UK publishers
- Created interactive ads for different main EU publishers such as Aftonbladet, Sky, etc.
- Helped clients with deciding on design and animations for their ads
- Improved ads by reducing the weight of assets and adding statistics for future improvements

Tools, Environment, and Technologies: **HTML5, canvas, JavaScript, jQuery**
